

Making renewables work **for you**

Integrated Management Services from **eco2**

Bespoke management services for your renewable energy asset

Running a renewable energy asset can be challenging. Negotiating Power Purchase Agreements, dealing with Ofgem, health and safety requirements, O&M contractors, financials, performance monitoring and reporting can be a lot to deal with without the help of an experienced Asset Manager.

With 20 years of experience in the sector, Eco2 is one of the UK's leading renewable energy Asset Managers.

Our teams manage assets of all sizes, including for the biggest renewables investment funds in the UK and Ireland.

Whatever your need or your budget, Eco2 can manage everything involved in running your renewable energy asset and make renewables work for you.

Find out more about how Eco2 can manage your renewable energy asset at eco2uk.com/AMS

Your one-stop platform for asset management, optimisation, and O&M

With Eco2, we can offer a one-stop shop to deal with all the management and maintenance requirements of your asset.

By integrating O&M Management and Asset Management, we can eliminate layers of margin and bureaucracy to deliver better value to you, the owner, while maximising your asset's overall performance.

Our in-house development and optimisation expertise enables us to deliver innovative options to asset owners that can add value to your asset.

Our service is completely bespoke, so we can do as much or as little as you require. As your Asset Manager we can get the best out of your existing O&M contractor, as well as other service providers.

Assets that perform better than the industry standard

Get the most out of your PPA:

Our excellent relationships with energy off-takers mean that we can often secure more favourable Power Purchasing Agreements for our clients. Whether your portfolio covers several sites, or a single asset, we can help maximise your income.

Reduce your risk:

Eco2 can handle all the regulatory and technical management aspects of your project. We will also make sure your asset is compliant with Health & Safety regulations, so you will never be caught out by changes in legislation. For wind assets, we can also provide 24/7 operational control centre support.

Unlock the value in your asset:

Eco2 has helped generate millions of pounds of additional revenue for our clients by leveraging our thorough understanding of the energy market and the regulator. Even the biggest investment funds find that they can improve their Ofgem submissions and optimise their revenues.

A team you can trust:

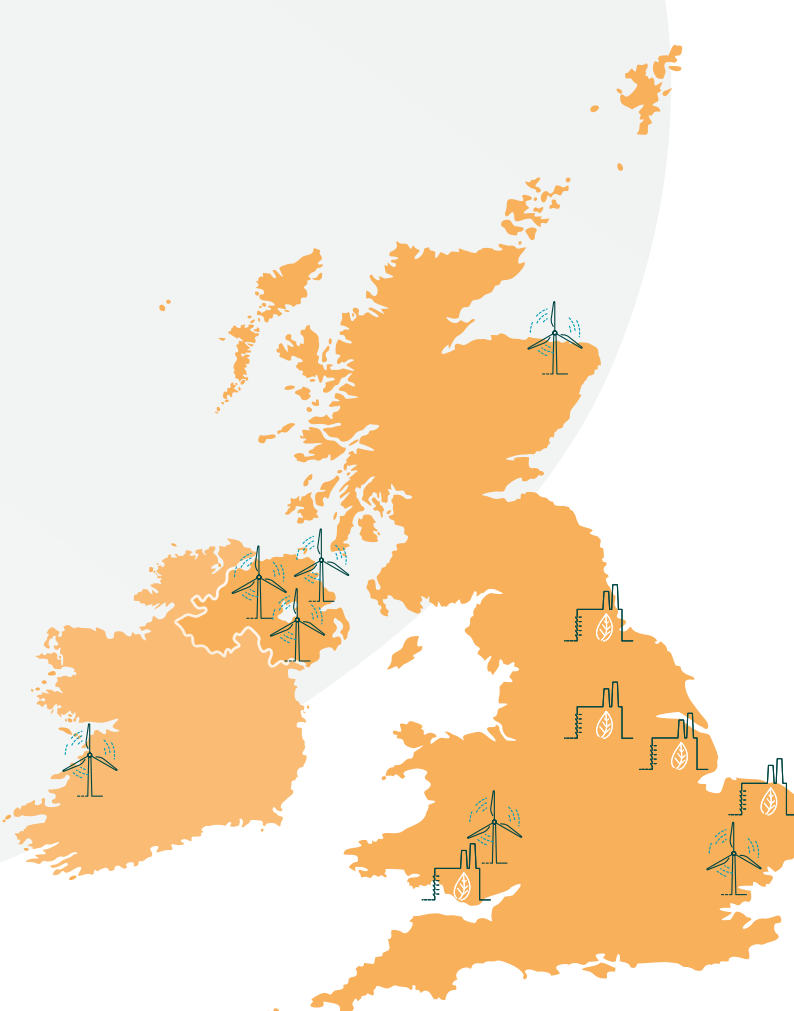

With one of Eco2's experienced Asset Managers assigned to manage all aspects of your project, you will have a trusted single point of contact who cares as much about the performance of your asset as you do.

Maximising your asset availability:

For Eco2, there is no such thing as 'good enough'. We understand that even marginal gains in performance or availability can make a huge difference to the profitability of your asset. As both a Developer and an Asset Manager, we know the potential issues that can face all kinds of renewable energy assets throughout their life cycles, and we can manage your O&M provider to resolve them quickly.

Wide reach, lean delivery

Eco2 have the scale and focus to deliver excellent value while managing your asset efficiently. With more than 60 staff, and coverage throughout the UK and Ireland, help is never far away. Without the excessive overheads or rigidity of other asset managers, Eco2 can offer the best possible service at highly competitive rates.

Small assets can enjoy big advantages

At Eco2, we work with all kinds of renewable energy owners and assets, from single wind turbines based on farms, up to large multi-site portfolios. Our relationships and economies of scale mean we can help all sizes of owner enjoy advantages that are typically only available to large investors, such as access to better PPA deals.

Multi-technology expertise

Eco2's team has experience across wind, solar, biomass and anaerobic digestion, as well as waste-to-energy and landfill gas. Our experience in both developing and operating a wide range of renewable technologies sets us apart in the sector.

Whatever kind of renewable asset you have, Eco2 can be your one-stop service provider to help maximise the value of your entire portfolio.
