

Making Anaerobic Digestion work for you

Can **eco2** help you achieve maximum income
from your Anaerobic Digestion plant?

Do you need help managing your Anaerobic Digestion plant?

Negotiating Power Purchase Agreements, dealing with OFGEM, sourcing fuel or feedstock, or compiling financial and performance reports can be a lot of work for an owner-operator without help of an experienced Asset Manager. **Wouldn't it be great to have this taken care of, so you can focus on the rest of your business?**

With 20 years of experience in renewable energy, Eco2 are the UK's leading renewable energy asset manager. Our teams manage assets on behalf of the UK's biggest renewables investment funds, across East Anglia, Wales, the East Midlands, North East and North West.

Our network means we can deliver the savings to small AD operators that previously were only available to large renewable investors. Whether it is sourcing parts or feedstock at competitive pricing, or negotiating better PPAs with power off-takers, our relationships and economies of scale mean that **with Eco2, your asset will perform better.**

We can handle everything involved in running a renewable energy asset, across technical and commercial management, project development, operational asset management, fuel procurement, financial reporting and regulatory compliance. So whether you need help negotiating a Gas/Power Purchase Agreement, obtaining environmental permits and consents, or managing contractors and financial reporting, we can take the angst out of AD, and do as much or as little as you require.

Keep the feedstock rolling

Every year, we source a million tonnes of straw and other biomass for bioenergy plants in Lincolnshire, Norfolk, and South Wales. Our teams across the UK deal directly with the fuel and feedstock supply chain, as well as operating 150,000 tonnes of feedstock storage capacity. Our network means we can maintain a predictable and consistent supply of feedstock for your AD plant, at the best value available.

Call us now to find out how we can improve your feedstock supply.

AD management made easy

We have built our own software to make managing renewable energy assets easy. Our bespoke software handles contract, inventory, logistic and financial management, and manages the whole process of fuel contracting, ordering and logistics, from end-to-end. Because our software is built and maintained by Eco2 in-house, we can adapt it to fit the way you want to work, adding or changing whatever functionality you need, at low cost and without fuss. **Call us now to find out how our software can help manage your plant.**

Join the green gas revolution

Your biogas could be worth more in the transport market than it can make from the Renewable Heat Incentive. The market in renewable transport fuels is growing fast as more and more hauliers make the switch to biomethane fuel. You can be part of the green gas vanguard too. **Call us now to find out how.**

Unlocking the value

Eco2 has generated millions of pounds of additional revenue for our clients, through our thorough understanding of the energy market and the regulator, from releasing additional support payments through OFGEM, to negotiating favourable PPAs. **Get in touch to find out how we can make your AD asset work better for you.**

We'll make it work

At Eco2, we know that the needs of agricultural businesses are a world away from corporate investors and consultants. We work with farmers, hauliers and other agricultural businesses every day, so when you need something done, we find a way to do it. **Call us now to find out how we can make your AD asset work better for you.**

Call us now

If you have an AD plant and you want to know how Eco2 can commercially optimise your plant, **call our Portfolio Manager, Robert Richards, now on 02920 730 930 or email managementservices@eco2uk.com.**
